Notes

- Spending: Includes field work; associated overhead costs; engineering, feasibility and economic studies; environment and land access costs.
- Off-Mine-Site: Excludes activities by mine operators on or surrounding their mine sites and activities at mines committed to production; however, it may include activities on sites of previously closed mines.
- Exploration and Deposit Appraisal: Includes all activities carried out to search for, discover, characterize and define a mineral deposit up to and including the pre-feasibility and final feasibility studies.
- Project: May represent a single property or a group of properties or claims.
- Mineral product: The primary mineral product is identified, but other minerals and metals may be present.
