ENERGY STAR®

Certified New Homes

**Meet
Alex,
Florence,
and Suzie.**

They just bought a new home. It is ENERGY STAR certified – this means it meets a higher energy efficiency standard than a regular new home.

Canada

**They relish
the special moments they
spend together, such as when they
watch TV as a family.**

**They feel comfortable.
The temperature is balanced with
fewer cold spots and drafts.**

This is all thanks to typical features in their home such as higher levels of insulation, efficient heating and cooling systems, and more airtight construction.

**Florence loves to read
next to the windows enjoying
the sunshine and the view.
It is getting cold outside
yet she is cozy.**

The energy-efficient windows help her stay warm. There is also less condensation getting in the way of her view compared to the windows in her old home.

**Suzie
enjoys quiet time in her
room. She is not bothered
by the hustle and bustle
outside.**

Typical features in her home such as higher levels of insulation, energy-efficient windows, and more airtight construction make the home quieter.

**Alex
suffers from allergies.
The good news is his new home is
built more airtight to prevent dust
and pollen getting into the home.**

This makes Alex happier.

The whole-house ventilation system
inside his home also improves the
indoor air quality.

**Florence and Alex
value their ENERGY STAR certified
home because it fits their lifestyle
and improves their quality of life.**

**They enjoy cooking dinner and
having friends visit. They are not
worried about lingering
food odours.**

The whole-house ventilation system
in their home helps to expel stale air,
humidity, and odours outdoors.

**Alex and Florence
appreciate that their home is
energy-efficient and helps protect
the environment.**

**It also allows them to invest their
savings into memories that will
last a lifetime.**
